

The Battle of Neighborhoods (Week 1)

Introduction:

New York City, the most populous city in the United States. Its population is estimated at 839,848 in 2018, distributed over a geographical area of 302.6 square miles.

New Yorkers live in the United States of America as the most densely populated city.

There are people from many countries, so they have different races.

In New York, many opportunities to open popular restaurants due to origin of the country of origin of the owner of the restaurant and the customers.

Problem description:

As we have mentioned, about population density and distribution in New York, but the opening of a popular restaurant for a race that is attracted to local popular foods should be chosen the right location.

If the site is available, there is no doubt that the site will be in a place where that race is distributed, and a very similar restaurant is likely to compete with the new restaurant.

Data Description:

The number of restaurants and the density distributed in the location of the neighborhood specified for the opening of the new restaurant.
